

BANGA

SOUTH AFRICAN BUSH PANGA

CONSERVATION · CLEARING · COMMUNITIES

The **Bush Panga [Banga]** is a multi-faceted, motorised tool built for communities and businesses that need an efficient way to clear verges, roadsides, walkways, orchards, vineyards, fire guards and game plains.

The Banga is built to order. Constructed from tubular steel and geometrically braced for rigidity. The industrial cutter has a lever tyre braking system, safety features and a 7Hpa engine that powers the chainsaw mechanism, allowing the operator to guide the cutter through flat or more challenging terrain.

Each Banga is built to order, allowing our engineers to modify the cutters to allow conservationists, farmers, clearing agents and communities to alter the machine, blades, balance system and safety features to best suit their environment.

WHAT MAKES THE BANGA UNIQUE?

- 1. TUBULAR STEEL FRAME** - geometrically graced for rigidity
- 2. LEVER TYRE BRAKING SYSTEM** - independant braking system
- 3. 7HPA ENGINE** - varied engine types available
- 4. SAFETY SYSTEM** - engine braking system and safety chains
- 5. INTERCHANGEABLE BLADE SYSTEM** - varied blades and vine/orchard available on request/quote.
